Final Analytical Report

Site Name -----Oil Trust Fund
Sample Collection Date(s)-- 09/16/10
Contact----- Rich Mayer (6PD-F)
Report Date-----09/23/10
Project #----- 10REG281
Work Order(s)-----1009044

Analyses included in this report:

LC DOSS

Report Narrative

DOSS was not found at or above the reporting limit for samples in work order 1009044

Note--DOSS was not found at or above the 10ug/L (ppb) level of interest

Standard procedures for quality assurance and quality control were followed in the analysis and reporting of the sample results. The results apply only to the samples tested. This final report should only be reproduced in full.

Reporting limits are adjusted for sample size and matrix interference.

This LC/MS/MS method is a developmental method that was created specifically for the Gulf oil spill by the Region 6 lab in conjunction with other EPA laboratories. Therefore it has not been validated with the normal rigorous procedures and performance data that an EPA method would normally complete before being released. Improvements will continue to be made to this method as more is learned about the nuances of this technique with these analytes and various matrices. Proper sample collection or preservation procedures have not been established and holding times are unknown.

Initial pressure in air analyses is the pressure at which the canister was received in psia (pounds *per* square inch absolute pressure).

The pH reported for Volatile liquid samples was tested using a 0-14 pH indicator strip for the purpose of verifying chemical preservation.

The statistical software used for the reporting of toxicity data is ToxCalc 5.0.32, Environmental Toxicity Data Analysis System 1994-2007 Tidepool Scientific Software.
